Revised Pilot for MHEWS

Operational exchange of meteorological data through WIS2box

01

What are we piloting?

Exchange and sharing of meteorological data through WIS2box

Purpose

Support Nyando Basin flood forecasting and advisory dissemination during [El Niño](#)

02

Priority datasets

Observational hourly rainfall data

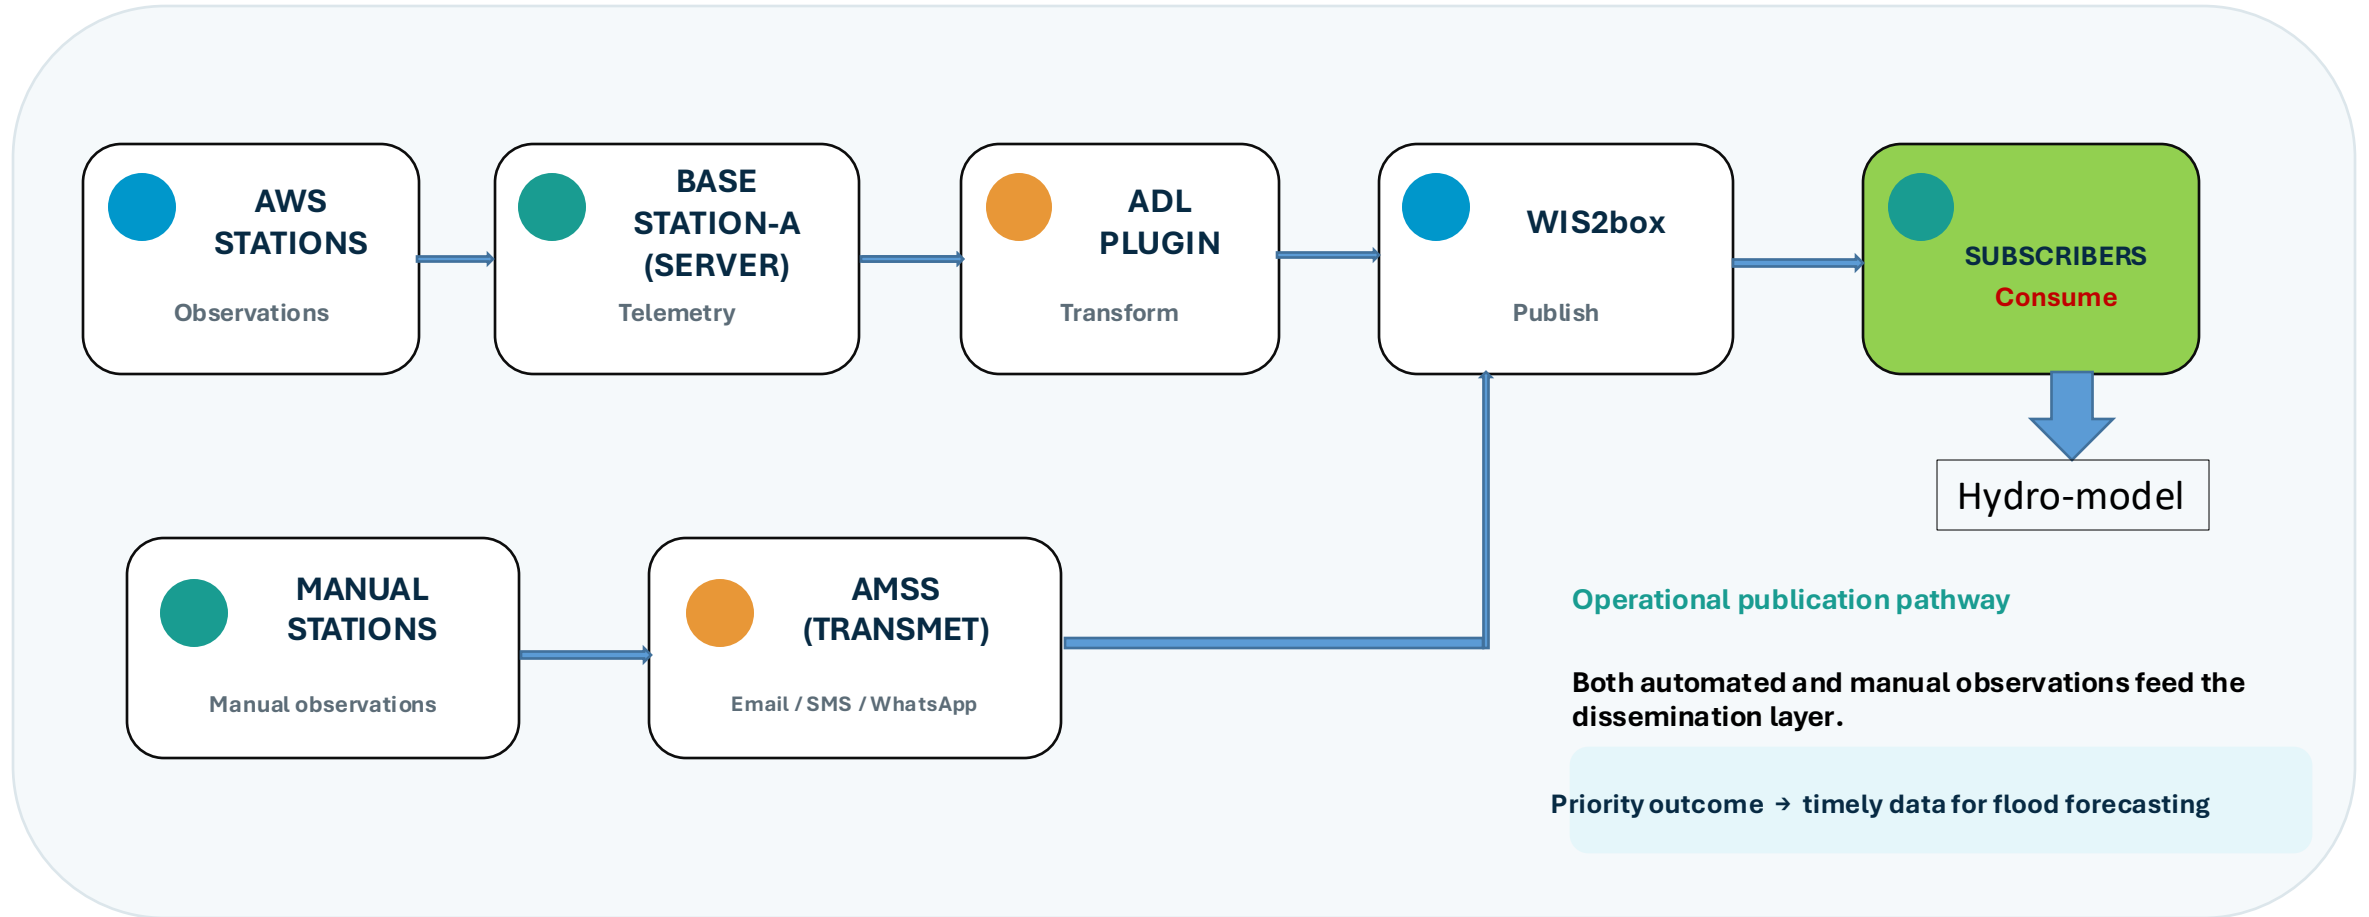

Forecasted rainfall

Others Temp, RH, etc

Operational focus: timely, structured and shareable data.

From observation to operational dissemination

What changed this week

The training and discussions led to two operational revisions.

01

AWS data-format handling

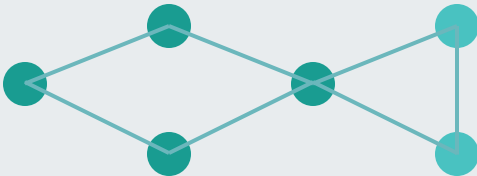

Translation of AWS data formats through ADL for WIS2box ingestion.

02

Expand stations coverage

Adding more stations to WIS2box for data exchange and sharing. Metadata- Assign WSI

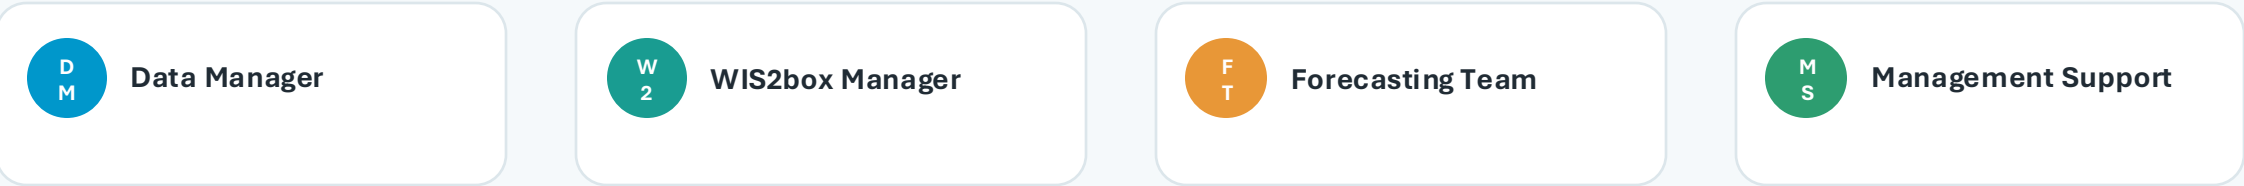

Key revision: strengthen the AWS-to-WIS2box translation pathway while increasing station coverage.

What happens next

Three actions move the pilot from design into joint operational implementation.

Who needs to be involved

Implementation objective → reliable, interoperable meteorological data exchange for MHEWS operations
